

## PUSH-PULLS

### INDUSTRIES

### FUNCTIONS

- Extending/Retracting
- Lifting

With the rising cost of wooden pallets and supply chain disruptions, manufacturers and suppliers are looking for alternative options to storing and moving goods. Push-Pull attachments are an efficient way to move loads without the need for traditional pallets. Typically used for bagged products like seeds and other agricultural materials, cosmetics and cased food, push-pulls replace pallets with inexpensive slip-sheets.

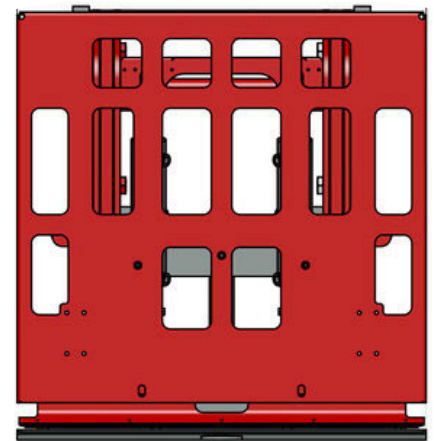

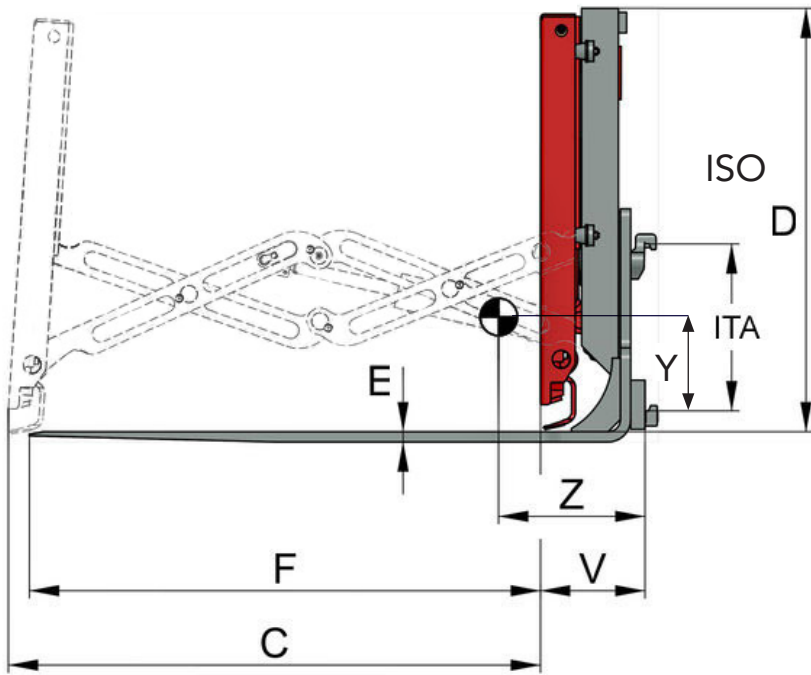

### FEATURES & BENEFITS

- **Attachment versatility:** no need for pallets, move bagged loads or stacked items with slip sheets
- **Modular design:** slip-on model can be fitted on existing forks; can use with or without adjustable carrying plate
- **Excellent visibility:** attachment designed with cut-outs for better operator sight
- **Attachment durability:** pushing mechanism is manufactured from high tensile steel, not castings, for maximum durability and attachment longevity

# No Pallet? No Problem.

## PUSH-PULLS

### Load Goods and Place With Ease.

Push-Pull hydraulic attachments can be fitted to existing forks and use inexpensive slip sheets. Purposefully designed openings in the attachment allow for optimal driver visibility. OEA Kaup Push-Pull attachments are designed with a scissor system so that the pushing mechanism is self-supporting. All hydraulic cylinders have been optimized to the required application guaranteeing safe handling of the load. The use of plastic sliding bushings makes the bearings of the scissor system maintenance-free. All models come standard with rubber stops to reduce excessive wear on attachments, increasing durability.
